

INTRODUCTION TO COMPUTER HARDWARE

1. Draw a labeled diagram of a desktop pc, clearly marking the motherboard, cpu, ram, gpu, and both hdd and ssd storage components.

Ans:

2. Create a comparison table showing the main differences between hdd and ssd storage in terms of speed, durability, and typical use cases.

hint: think about which one is faster, which is more shock-resistant, and where you would usually find each type (laptop, gaming pc, etc.).

Ans:

feature	hdd	ssd
speed	slower	much faster
technology	magnetic disk	flash memory
durability	less durable	more durable
noise	makes noise	silent
best for	large storage	gaming & fast performance

3. Write a short explanation (2-3 sentences each) describing the role of the cpu, ram, and gpu in running a game like pubg or free fire on a pc.

Ans:

Cpu:(central processing unit):

the cpu processes game logic, controls characters, and manages all instructions while playing games like pubg or fifa.

Ram:(random access memory)

ram stores game data temporarily so the game runs smoothly without lag.

Gpu:(graphics processing unit)

the gpu renders graphics, animations, and visual effects to provide high-quality gameplay and higher fps.

4. imagine you want to upgrade your pc to run the latest version of fifa smoothly. list which hardware components you would consider upgrading and explain why for each.

Ans:

Component	Why upgrade?
gpu	better graphics and higher fps
ram(16gb+)	smooth multitasking and gaming
ssd	faster game loading and boot time
cpu	improves overall game performance
cooling system	prevents overheating during gaming
power supply (psu)	support upgraded hardware
